

Skytap Cloud Advanced Import Appliance

Automate and Accelerate VM Imports

The Advanced Import Appliance saves you time and reduces import errors by automatically creating and executing VM import jobs as well as pre-validating VMs before uploading.

Automated Imports

The Advanced Import Appliance automatically creates import job and uploads VMs for you. You can also set the appliance to continuously cycle through your existing workloads to search for new VM imports.

Pre-Validation

Each VM is certified before being uploaded, helping you avoid import errors and the manual steps required to correct them and reprocess.

Queue Management

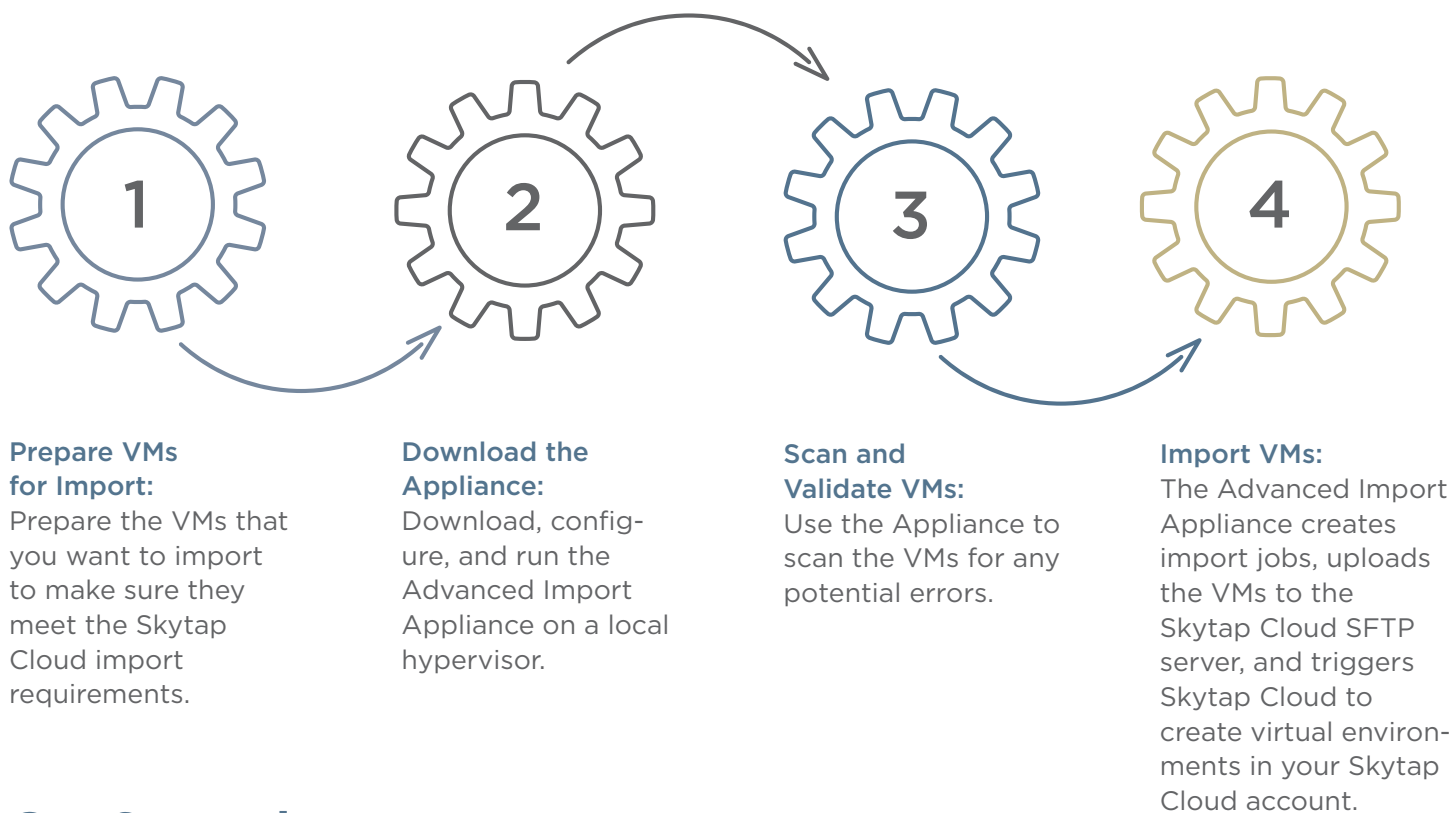

Skytap Cloud offers a set number of import slots that must be

Environment Configuration

With the Advanced Import Appliance, environment configuration becomes part of the import process instead of a manual step following import. Configuration can be distributed among VM owners.

How It Works

The advanced import appliance is designed to be used for multi-VM, vApps, and VMs with large virtual hard drives. It works as an external tool that you can download and run in a local hypervisor.
